

2025

strategic systems

CMA is a nationally recognized systems integration firm with 40 years of experience developing, implementing, and optimizing modernized system architectures and applications.

Our tailored solutions seamlessly integrate with cross-domain environments, from on-prem data centers to cloud and mobile platforms.

Solutions

Integrated Client-Centric Software Development to Advance Your Business Objectives

Talent

Aligning Your Business Structure and Mission with Highly Experienced Talent

Products

Project Oriented Expertise to Rationalize and Modernize Your Data Infrastructures

Partnerships

Strategic Partnering Featuring Best-In-Class Data and Analytic Software Tools

Our collaborative approach, combined with leading-edge technology, expert talent, and large-scale implementations drive transformational outcomes within the public sector, banking, and education industries.

PHARMACY PLATFORMS POWERED BY LYFEGEN

The high cost and affordability challenges of pharmacy benefit programs and gene cell therapies have prompted CMS and state Medicaid programs to evaluate and pursue alternative forms of reimbursement. Implemented successfully around the world, value-based pharmaceutical arrangements (VBPA) have demonstrated successful alignment of payments with the actual outcomes generated to promote patient access to potentially life-saving treatments.

Based on lessons learned, VBPA are reliant on processing a vast amount of data from a variety of sources and purpose-built analytics that conform to both payer and manufacturer adopted performance metrics. CMA's Value-Based Pharmacy Platform (VBPP)- powered by Lyfegen, integrates the proven assets, capabilities, and experience of industry recognized leaders in VBPA, making it possible for Medicaid programs to efficiently and effectively launch, administer, and extend the capacity of existing data and analytic infrastructures, as well as deploy and automate the adjudication of VBPA.

Leveraging Mosaic Insights in GCP data fabric, CMA orchestrates a secure aggregation of data from claims-clinical and patient generated devices, to assess and analyze performance metrics that align with the nuanced terms and conditions of highly complex VBPA.

Our industry- leading solution combines attributes that are essential for Medicaid programs wanting to enter into VBPA:

- Subject matter expertise and credibility coupled with the world's largest library of existing VBPA models assists states with the identification, simulation, and negotiation of viable VBPA with leading pharma/med companies.
- Transparent and trusted data aggregation, management, and orchestration using highly scalable, secure, cloud-based architecture that aligns federal and state standards.
- Flexible, analytic visualization and reporting tools that align unique features of individual VBPA.
- Enable authorized stakeholders to access and publish associated datasets, reports and dashboards to common platforms.
- Monitor and manage VBPA in a timely and precise manner.

CMA's VBPP- powered by Lyfegen, is the Medicaid industry's ONLY proven solution for administering powerful VBPA that promote beneficiary access to potentially life-saving treatments and aligns payments with actual patient outcomes.
